# PolyTouch™ M09 Series

## INTRODUCTION

PolyTouch™ M09 series are designed to be integrated into EDT's standard TFT display modules for size of 3.5", 4.3", 5.0", 5.7" and 7.0". They are mechanically comparable to the same size of Resistive Touch Panels (RTP), therefore, it performs the perfect replacement when upgrading the touch function from RTP's simple button touch to advanced gesture or multi-touch.

High temperature and humidity reliability implementation (85°C,90%,1000 hours) has proven the robust design of M09 series at extreme operation conditions. Friendly tunable sensibility by three internal parameters, along with extensive noise immunity hardware design, M09 series is smart and outstanding for most industrial applications.
