

electronica

World's leading trade fair and conference for electronics
November 15–18, 2022 | Messe München

In 2020 the electronica exhibition was virtual due to COVID19 and this year we have decided to participate though aware of the potential risk of another outbreak – we will be taking our outmost precaution for our visitors, customers, and employees health.

Come visit us in Hall B5 Stand 402

We are ready to guide you through our portfolio of products and help with any challenges you may have with your coming projects.

This time our focus will be on solutions that will bring your product great value, quality and are up to date with the latest trends and technologies. Here are some of the Highlights

Our **Smart Embedded**® displays solution will be shown in many different variations and applications, like an EV-Charger.

SpaceGesture® evolved from Covid19 - rise of health awareness, people fear the spread of disease caused by direct contact with the surface of the object.

The new UI2 family – Four display sizes using IPS* Panels. All required voltages directly on the FPC tail. - Integrated backlight driver 50-pin interface connector - optimized EMC behaviour - available with Capacitive Touch Panels (CTP) 2mm thick, chemically hardened, overhanging, and black-printed cover lens.

Privacy Display - switches to a narrow view angle, so customers are reassured that their secret data is visually protected when they are using the terminal and enables them to complete purchases quickly and privately.

All presented on our stand, by our accommodating European staff.

We will with great pride help and support you from when you enter the booth – until your product is developed, sent, and launched on your marketplace.

Looking forward seeing you

Emerging Display Technologies Corp.
