

November 2020

Following Mitsubishi Electric’s official press release in June 2020, where the company announced:

The company’s LCD business, currently focusing on small and medium-sized TFT-LCD modules for industrial and automotive use, has been expanding its business by developing and launching high value products with advanced technologies in the specific market segments based on the market needs. However, the company has decided to end the TFT-LCD modules production and terminate the business based on the consideration that the company is no longer able to maintain the products’ competitiveness under the situation that the global competition involving the company’s focusing segment of high display performance and high reliability expands and intensifies with significant falling in price.

We decided to develop a new series of display modules aimed as compatible replacements and offering same features such as size and resolution and same mechanical outline structure. EDT display modules come with high and consistent product quality level combined with superior customer service and longevity support following our company policy and market strategy.

Until further we have planned for 3 sizes in XGA resolution (refer the table below), and more sizes can be added to this road map. If you are looking for other product sizes to replace Mitsubishi module, please do not hesitate to send us your inquiry and notify us what are the most important criteria for your application, then together we will find or develop the most suitable alternative.

Product								
Size	Res.	P/N	Status	Kick Off	CAS	1# Sample	Final Sample	MP
8.4"	1024 x 768	ET084030DVA	Developing	Sep. 18	Oct. 12th	End Dec.	Jan. 2021	2021
10.4"	1024 x 768	ET104030DSA	Developing	Oct. 8th	Oct. 23th	End Dec.	Jan. 2021	2021
12.1"	1024 x 768	ET121030DVA	Developing	Sep. 7th	End Sep.	End Nov.	Jan. 2021	2021
